

TIME & WORK

Time & Work

- ⑧ If 24 men can do a piece of work in 36 days. In how many days can 54 men do it.

$$M_1 D_1 = M_2 D_2$$

$$\frac{24}{8} \times \frac{36}{2} = \frac{54}{3} \times D_2$$

$$\Rightarrow D_2 = 16 \text{ days}$$

Time & Work

- ⑧ If 44 men can complete the work in 24 days. Find the no. of men required to complete the same work in 32 days.

$$M_1 D_1 = M_2 D_2$$

$$\frac{44}{11} \times \frac{24}{3} = \frac{M_2}{4} \times 32$$

$$\Rightarrow M_2 = 33 \text{ days}$$

Time & Work

If M_1 18 binders can bind w_1 900 books in D_1 10 days. How many binders M_2 will be required to bind w_2 660 books in D_2 12 days.

$$\frac{M_1 D_1}{w_1} = \frac{M_2 D_2}{w_2}$$

$$\frac{18 \times 10}{900} = \frac{M_2 \times 12}{660}$$

$$\frac{18 \times 10}{3 \times 30} = \frac{M_2 \times 12}{33 \times 11}$$

$$\Rightarrow M_2 = 11 \text{ men}$$

Time & Work

If M_1 3 pumps can empty a tank in D_1 2 days working H_1 8 hours a day.
 How many hours a day must M_2 4 pumps work to empty the tank in D_2 1 day? H_2 ?

$$M_1 D_1 H_1 = M_2 D_2 H_2$$

$$3 \times 2 \times 8 = 4 \times 1 \times H_2$$

$$\Rightarrow H_2 = 12 \text{ hours}$$

A Fodder Stock lasts for D_1 36 days for M_1 20 cows.
 How long will it last for M_2 15 cows? D_2 ?

$$M_1 D_1 = M_2 D_2$$

$$20 \times 36 = 15 \times D_2$$

$$4 \quad 12 \quad 3$$

$$\Rightarrow D_2 = 48 \text{ days}$$

CREATE A PARTNER (in long)

Time & Work

⑧ If M_1 6 Men working H_1 8 hours a day earn w_1 Rs 840 per week.
 then M_2 9 Men working H_2 6 hours a day will earn how much w_2 per week? $w_2 = ?$

$$\frac{M_1 H_1}{w_1} = \frac{M_2 H_2}{w_2}$$

$$\frac{6 \times 8}{840} = \frac{9 \times 6}{w_2}$$

$$\frac{105}{105} = \frac{9 \times 6}{w_2}$$

$$\Rightarrow w_2 = 9 \times 105$$

$$\Rightarrow w_2 = \text{Rs } 945$$

Time & Work

M_1
 16 Men can do a job in D_1 30 Days. Till 10 days 16 Men ~
 After 10 days, 6 Men left.

In how many days, the remaining work will be finished?

$M_1 D_1 = M_2 D_2$ - 6 Men

$$16 \times 30 = (16 \times 10) + (10 \times D_2)$$

$$480 = 160 + 10D_2$$

$$\Rightarrow 10D_2 = 480 - 160$$

$$\Rightarrow 10D_2 = 320$$

$$\Rightarrow D_2 = \frac{320}{10} = 32 \text{ days}$$

$M_1 D_1 = M_2 D_2$

$$16 \times 30 = (16 \times 10) + (10 \times D_2)$$

$$480 = 160 + (10 \times D_2)$$

$$10 \times D_2 = 320$$

$$D_2 = 32 \text{ days}$$

Time & Work

M_1
 12 Men can complete the work in D_1 8 days. 3 Days after they
 started the work, 3 more men joined them.

In how many days, remaining work will be completed?

$M_1 D_1 = M_2 D_2$ + 3 M

$$12 \times 8 = (12 \times 3) + (15 \times D_2)$$

$$96 = 36 + (15 \times D_2)$$

$$15 \times D_2 = 96 - 36$$

$$15 \times D_2 = 60$$

$$\Rightarrow D_2 = 4 \text{ days}$$

Time & work

- Q) A certain work can be done in a certain time by 36 Men. But, had there been 9 men more, it could have been done in 5 days less. In how many days, 20 Men can do the same work?

$$M_1 D_1 = M_2 D_2$$

$$36 \times D_1 = (36 + 9) \times (D_1 - 5)$$

$$36 D_1 = 45 (D_1 - 5)$$

$$36 D_1 = 45 D_1 - 225$$

$$\Rightarrow 45 D_1 - 36 D_1 = 225$$

$$\Rightarrow 9 D_1 = 225$$

$$\Rightarrow D_1 = 25 \text{ days}$$

$$M_1 D_1 = M_2 D_2$$

$$36 \times 25 = 20 \times D_2$$

$$D_2 = 45 \text{ days}$$

- Q) 3M or 4W can complete the work in 43 days. How long will 7M and 5W take to complete it.

Sol:

No of Days
$\frac{QM}{1M} + \frac{QW}{1W}$

$$= \frac{43}{\frac{7}{3} + \frac{5}{4}}$$

$$= \frac{43}{\frac{28 + 15}{12}}$$

$$= \frac{43}{\frac{43}{12}} \Rightarrow 12 \text{ days}$$

Q If 10 Men (or) 12 women can do a work in 16 days.
In how many days can 15 Men and 6 women together do it?

$$\frac{\text{Days}}{\frac{QM}{1M} + \frac{QW}{1W}} = \frac{16}{\frac{3 \times 16}{10} + \frac{1 \times 16}{12}} = \frac{16}{\frac{4}{2} + \frac{4}{3}} = \frac{16}{\frac{10}{6} + \frac{4}{6}} = \frac{16}{\frac{14}{6}} = \frac{16 \times 6}{14} = \frac{16 \times 3}{7} = \frac{48}{7} \approx 6.85 \text{ days}$$

Q 3 Men can complete the work in 18 days. 6 Boys can also complete the same work in 18 days. In how many days will 3 Men and 4 Boys will complete the same work?

$$3M \rightarrow 18 \text{ day}$$

$$6B \rightarrow 18 \text{ day}$$

$$3M = 6B \quad \text{--- (1)}$$

$$3M + 4B \rightarrow ?$$

$$6B + 4B \rightarrow ?$$

$$\begin{array}{l} 10B \rightarrow ? \\ 6B \rightarrow 18 \text{ day} \end{array}$$

$$M_1 D_1 = M_2 D_2$$

$$\frac{6 \times 18}{3} = \frac{10 \times D_2}{5} \Rightarrow D_2 = \frac{54}{5} = 10 \frac{4}{5} \text{ days}$$

2. If - 3M or 6B \rightarrow 18 days
Q 3M and 4B \rightarrow ?

$$\frac{\text{Days}}{\frac{QM}{1M} + \frac{QB}{1B}}$$

$$= \frac{18}{\frac{3}{3} + \frac{4}{6}} = \frac{18}{\frac{2}{3} + \frac{4}{6}} = \frac{18}{\frac{4}{6} + \frac{4}{6}} = \frac{18}{\frac{8}{6}} = \frac{18 \times 6}{8} = \frac{18 \times 3}{4} = \frac{54}{4} = 13 \frac{1}{2} \text{ days}$$

$$= \frac{18}{\frac{10}{5} + \frac{4}{3}} = \frac{18 \times 15}{10 \times 3 + 4 \times 5} = \frac{270}{30 + 20} = \frac{270}{50} = \frac{27}{5} = 5 \frac{2}{5} \text{ days}$$

$$A = 20$$

$$B = 30$$

$$A+B \rightarrow \frac{\text{Product}}{\text{Sum}} = \frac{P}{S}$$

$$\rightarrow \frac{20 \times 30}{20 + 30} = \frac{\overset{4}{\cancel{20}} \times \cancel{30}}{\cancel{80}} = 12 \text{ days}$$

$$A+B \rightarrow 12 \text{ days}$$

$$A \rightarrow 20 \text{ days}$$

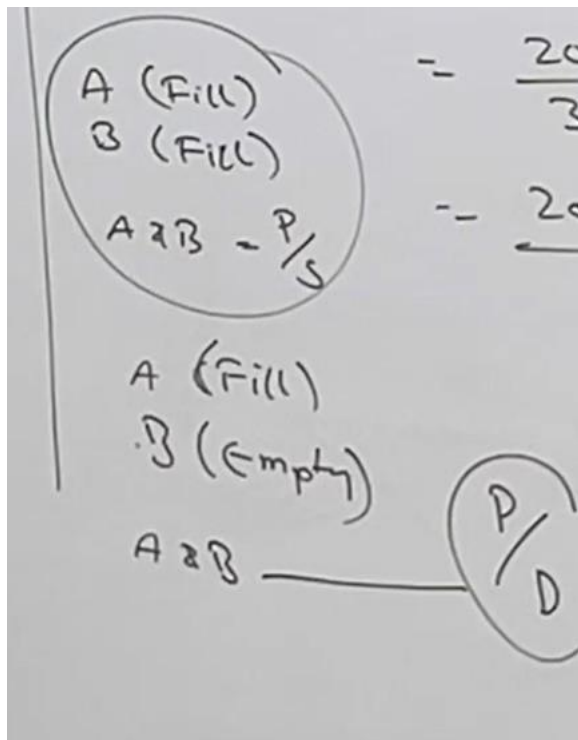

$$B \rightarrow ?$$

$$B \rightarrow \frac{\text{Product}}{\text{Diff}} = \frac{P}{D}$$

$$\rightarrow \frac{20 \times 12}{20 - 12}$$

$$\rightarrow \frac{\overset{10}{\cancel{20}} \times 12}{\cancel{2}} = 30$$

$$B \Rightarrow 30 \text{ days}$$

~~$$\begin{array}{lcl} 100\% & \rightarrow & 60 \\ 150\% & \rightarrow & ? \\ \hline \frac{100 \times 60}{150} & = & 40 \text{ days} \end{array}$$~~

Q A can complete the work in 60 days. If B is 20% less efficient than A, then 'B' can complete the work in how many days?

$$\begin{array}{lcl} A \rightarrow & 100\% & \rightarrow 60 \text{ d} \\ B \rightarrow & 80\% & \rightarrow ? \end{array}$$

$$\begin{array}{lcl} 100M & \rightarrow & 60 \text{ d} \\ 80M & \rightarrow & ? \end{array}$$

$$M_1 D_1 = M_2 D_2$$

$$\frac{100 \times 60}{80} = \frac{80 \times D_2}{4}$$

$$D_2 = 75 \text{ days}$$

A = 30 days

B is 50% more efficient than A

A & B = ? days

A → 100% — 30 days

A+B → 250% — ?

100M — 30 days

250M — ?

$$M_1 D_1 = M_2 D_2$$

$$\frac{100 \times 30}{4} = \frac{250 \times D_2}{4}$$

$$\Rightarrow D_2 = 12 \text{ days}$$

A — 100%

B — 150%

A+B → 250%

A → 188 days

* B is 20% more efficient than A.

* C is 30% more efficient than B.

Find A, B & C together can complete the work in how many days?

A — 100%
20% (20% of 100)

B — 120%
36% (30% of 120)

C — 156%

A+B+C → 100+120+156

A+B+C = 376%

A → 100% — 188 days

A+B+C → 376% — ?

100M — 188 Days

376M — ?

$$M_1 D_1 = M_2 D_2$$

$$\frac{100 \times 188}{50} = \frac{376 \times D_2}{2}$$

$$\Rightarrow D_2 = 50 \text{ days}$$

A does $\frac{4}{5}$ of the work in 20 days. He then calls in B & the together finish the remaining work in 3 days.
How long would B alone take to do the whole work?

Sol:-
$$\begin{array}{r} 4 \times 5 = 20 \\ 5 \times ? = 25 \text{ days} \end{array}$$

$A = 25 \text{ days}$

$A+B \rightarrow 1 \times 3 = 3 \text{ days}$

$A+B \rightarrow 5 \times 3 = 15 \text{ days}$

$A+B = 15 \text{ days}$

$A = 25 \text{ days}$

$B = ?$

$$\Rightarrow B = \frac{\text{Prod}}{\text{Dif}} = \frac{25 \times 15}{25 - 15} = \frac{25 \times 15}{10} = \frac{375}{10}$$

$\Rightarrow 37.5 \text{ days} = 37\frac{1}{2} \text{ days}$

$A = 20 \text{ days}$

$B = 30 \text{ days}$

~~$$\frac{P}{S} = \frac{20 \times 30}{80} = 12 - 3 = 9$$~~

* Both started work together.

* But, before 3 days of completion, B left the work.

* Total work - ?

$\Rightarrow 3 \text{ days, A worked Alone}$

$A = 20 \rightarrow 3$

$B = 30 \rightarrow 9$

$T.W = 60$

* $A+B = 5 \times ?$

* $A \rightarrow 3 \times 3 = 9$

Total $\Rightarrow 60 - 9 = 51 \text{ parts}$

$5\frac{1}{5} = 10\frac{1}{5} \text{ days} - A+B$

$\frac{3}{13\frac{1}{5} \text{ days}} - A$
